Emory Abroad

Biology 340 Tropical Biology

This course is geared toward majors and minors in Biology and Environmental Studies and meets once a week during the spring semester to discuss various aspects of biology in the tropics, including rainforest ecology and wildlife diversity, as well as the culture and traditions of Costa Rica.

The course concludes with a two-week study experience in Costa Rica, where students travel from the capital city of San Jose to the Pacific coast, through the central mountains, and finally to the Caribbean lowlands. Here, students design research projects, collect and analyze data, and present their findings.
